Pediatric Electrodes for the AED Plus[®] and AED Pro[®]

The Only Full-Rescue AED with Intelligent Pediatric Capability

The ZOLL AED Plus Intelligent Pediatric Capability includes voice and text prompts that tell rescuers that *pedi•padz II* are connected, ensuring that the proper electrodes are being used. Separate and specific algorithms for adults and children are used to analyze a victim's heart rhythm. Separate energy levels also have been incorporated for pediatric patients. Electronics in the AED Plus adjust defibrillating energy levels automatically so that suitable doses are delivered accurately, when needed. *pedi•padz II* electrodes are designed especially for use with the AED Plus and AED Pro, and are also compatible with the M Series® and E Series®, allowing continuity of care*. The AED Plus and AED Pro do not rely on a resistor or other hardware in the wires to reduce delivered energy. Anatomical diagrams on the package facilitate proper pad placement.
